

PolyU Summer Programme 2018

The one-day PolyU Summer Programme – LSGI session was successfully held on 13 July 2018.

Organized by the Secondary School Relations Section of the Office of Undergraduate Studies, the summer programme gave some local secondary students in forms 4 and 5 an introduction to the undergraduate programmes offered by the university. This year, LSGI session received 35 secondary school students from 15 local secondary schools.

The programme engaged the participants with hands-on workshop in satellite image processing, including normalized difference vegetation index, satellite image overlay analysis and integrated analysis by case studies. We introduced our undergraduate programmes and provided tours to two laboratories, Laboratory for Smart City and Spatial Big Data Analytics and Underground Utility and Survey Laboratory.

It was a range of worthwhile experiences for all the students who participated.
