On 6 July 2015 (Monday), 36 students from various secondary schools visited the Department of Land Surveying and Geo-informatics (LSGI) and participated in the PolyU Summer Programme 2015.

During the visit, Mr. Kent Lam, Teaching Fellow, introduced the subjects and the programmes on offer, admission requirements and career prospects of the graduates. To allow the participants to learn more about LSGI, Raymond Hung, a PhD student, and Wong Siu Lun, a BSc Year 2 student, shared their lives in LSGI and gave some studying tips to the participants.

Participants were showcased the advanced equipment in various disciplines. Mr. Nelson Chan, Instructor, and Mr. Chen Biyan, research personnel, presented the modern GNSS instruments. Dr. Bruce King, Associate Professor, explained the laser scanning technology and demonstrated the LiDAR by taking a laser group photo of the students! They also visited the Underground Utility Survey Laboratory, where Dr. Janet Shum, Postdoctoral Fellow, demonstrated the technology and application of ground penetrating radar (GPR).

Apart from visiting LSGI, participants also visited different campus facilities. With this valuable opportunity and wonderful experience to prepare themselves for further studies, LSGI looks forward to meeting these students in the campus soon!
